Data Engineer — Databricks — Apache Spark — Snowflake — Python — SQL — Azure — AWS

Summary

Data Engineer with 2+ years of experience building scalable data pipelines and analytics platforms using Databricks, Apache Spark, and Snowflake. Experienced in designing ETL pipelines processing 25M+ records daily, optimizing distributed workloads, and building reliable data infrastructure for analytics and reporting. Skilled in modern data stack technologies including Airflow, Delta Lake, Iceberg tables, and cloud-based data platforms.

Technical Skills

Data Engineering: Databricks, Apache Spark, PySpark, Snowflake, Delta Lake, Iceberg Tables, ETL Pipelines, Data Warehousing

Programming: Python, SQL

Pipeline Orchestration: Apache Airflow, Matillion, Autosys

Cloud Platforms: Azure, ADLS

Data Processing: Batch Processing, Distributed Computing, Data Modeling, Schema Evolution

DevOps / Tools: Docker, Git, GitHub Actions

Certifications

- Databricks Certified Data Engineer Professional
- Databricks Certified Data Engineer Associate
- Microsoft Certified: Azure AI Fundamentals (AI-900)
- Microsoft Certified: Azure Fundamentals (AZ-900)
- Microsoft Certified: Github Copilot (GH-300)

Experience

Data Engineer Feb 2024 – Present
EY Global Delivery Services, Bengaluru

- Built **scalable ETL data pipelines on Databricks using Apache Spark and PySpark**, migrating enterprise data from **Oracle DB2 to Snowflake** and processing **25M+ records daily**.
- Optimized **distributed Spark workloads** using partitioning and broadcast joins, reducing pipeline runtime by **40%**.
- Worked with **Iceberg table architecture on Snowflake to support schema evolution and historical tracking**, reducing data reprocessing effort by **75%**.
- Developed reusable **Python-based data processing utilities** for data standardization and ETL automation, reducing manual deployment effort by **99%**.
- Accelerated **SDLC productivity using GenAI tools (GitHub Copilot and AI agents)** and implemented **MCP server integrations with GitHub and Jira** to automate contextual Jira updates from code changes.

Projects

Master Trade AI Platform — Python, Airflow, Docker, Streamlit

- Built ETL pipelines using Apache Airflow to ingest and process financial market datasets.
- Developed Python data processing pipelines and automated CI/CD using Docker and GitHub Actions.

Education

Vellore Institute of Technology
B.Tech in Computer Science
CGPA: 7.9/10

2019 – 2023
